5. China (Nationalist): 172 Infantry divisions. Chinese divisions vary widely in strength equipment and tactical efficiency. Strength ranges from less than 5,000 to over 15,000 per division. The 3 tank regiments in the Chinese Army are weak in tanks and ineffective as an armored unit. The single Chinese parachute regiment has never been tactically employed as such, having been used as an elite guard unit, and therefore is excluded from this tabulation.
